

## Concrete Finishing with Kemiko Stain

Kemiko Stone Tone Stain is the perfect choice for a beautiful finish on unfinished concrete.

Concrete staining gives a clean, attractive look to driveways, patios, walk-ways, and entrances. It is perfect for high-traffic areas and is very affordable.

Kemiko Stone Tone Stain transforms an ordinary concrete slab into a luxurious old world floor resembling marble or glazed stone. Kemiko Rembrant colors have vibrant modern colors that turn floors into works of art.

Concrete absorbs the stain in varying degrees of intensity, creating multi-hued color variations and an uneven surface that looks beautiful and aged.

The Kemiko process surpasses all others in performance and durability. It will not chip, fade, or peel, and will last the lifetime of the surface to which it is applied. It is y maintenance free for a carefree lifestyle -- simply damp mop as needed.

Kemiko Stone Tone Stains will transform any concrete surface into an easy to maintain floor, while still being very economical.
